Entrepreneurial Resilience and Innovation during Economic Crises: A Cross-Country Analysis

Dr. Faisal Mehmood

Associate Professor, Department of Management Sciences, COMSATS University Islamabad, Pakistan

Abstract: *Economic crises pose significant challenges to entrepreneurs, but they also foster conditions for innovation and resilience. This study explores how entrepreneurs across different countries adapt during economic downturns, focusing on their capacity for innovation, strategic change, and resilience. Using a comparative analysis of SMEs from Pakistan, Turkey, and Malaysia during the COVID-19 and post-2022 inflationary crisis, the research identifies key success factors that enable businesses to survive and thrive. Through surveys, case studies, and regression modeling, we found that entrepreneurial resilience is significantly influenced by digital innovation, governmental support, and social capital. Our findings contribute to the literature on crisis management and entrepreneurial adaptability in volatile economies.*

Keywords: *Entrepreneurial Resilience, Economic Crisis, Innovation, SME Adaptability.*

Introduction:

Entrepreneurship plays a vital role in economic development, especially during periods of uncertainty and crisis. Economic shocks such as the COVID-19 pandemic, inflation surges, and geopolitical conflicts have drastically disrupted global markets, placing immense pressure on small and medium-sized enterprises (SMEs). Yet, history shows that resilient entrepreneurs not only endure crises but often emerge stronger. This paper investigates the mechanisms of entrepreneurial resilience and innovation during crises, with a special focus on how context-specific variables across countries impact outcomes. We examine cross-country entrepreneurial responses in Pakistan, Turkey, and Malaysia to derive comparative insights that may inform policy and practice.

1. Conceptual Framework of Entrepreneurial Resilience:

Entrepreneurial resilience refers to the dynamic capacity of entrepreneurs and their ventures to endure, adapt, and grow in the face of adversity. It is rooted in both psychological traits and strategic business behaviors, encompassing persistence, opportunity recognition, and innovative thinking under constraints [1].

Definitions and Theoretical Underpinnings:

Resilience in entrepreneurship has been explored across psychological and strategic management perspectives. According to Ayala and Manzano [1], entrepreneurial resilience is "a dynamic capacity allowing entrepreneurs to continually learn and adapt to a changing environment." Shepherd and Williams [2] conceptualize resilience not merely as recovery but as the ability to transform and renew the business through crisis-induced learning. These views are aligned with the resource-based view and dynamic capabilities theory, emphasizing that internal competencies and strategic agility determine resilience outcomes.

Crisis Typologies: Financial, Pandemic, Inflationary:

Economic crises can vary in their origin and impact.

Financial crises (e.g., 2008 recession) disrupt capital availability and consumer demand [3].

Pandemics (e.g., COVID-19) bring supply chain interruptions, labor shortages, and health-related uncertainty [4].

Inflationary crises (e.g., post-2022 global inflation) strain operational costs, reduce purchasing power, and create market instability.

Each type imposes distinct adaptive requirements on entrepreneurial ventures.

Resilience vs. Adaptability vs. Innovation:

Resilience refers to withstanding shock and maintaining functionality.

Adaptability implies adjusting structures, models, or processes to fit the altered environment.

Innovation is often the output of resilient behavior, involving new products, services, or business models developed in response to challenges [5].

Duchek [5] identifies three stages of organizational resilience: anticipation, coping, and adaptation, wherein innovation plays a central role during and after crisis. Boin et al. [6] emphasize that resilient entrepreneurs often exhibit a proactive posture, seeking opportunities in crises rather than just mitigating threats.

2. Methodology and Country Profiles:

This study employs a **comparative case study** design with a **mixed-methods approach** to examine how entrepreneurs in Pakistan, Turkey, and Malaysia demonstrate resilience and innovation during economic crises. The research integrates both quantitative and qualitative data to provide a comprehensive understanding of cross-national entrepreneurial behavior in volatile economic environments [7].

Comparative Case Study Design and Mixed-Methods Approach:

The rationale for using a mixed-methods framework is to capture both the measurable patterns of resilience and the nuanced, context-specific behaviors of entrepreneurs.

Quantitative component: Structured surveys were administered to a sample of 360 SMEs across the three countries (120 per country), covering topics such as crisis impact, innovation practices, financial performance, and resilience strategies.

Qualitative component: Semi-structured interviews were conducted with 45 SME owners and senior managers (15 per country) to explore lived experiences, adaptive strategies, and lessons learned from recent economic disruptions.

Triangulation of data from both sources strengthens the validity of the findings and allows for cross-cultural comparisons [7].

Description of Sample Countries and SME Sectors:

The selected countries—Pakistan, Turkey, and Malaysia—share similarities as emerging markets with large SME sectors, yet differ in institutional maturity and policy support.

Pakistan: SMEs represent over 90% of total enterprises, contributing approximately 40% to GDP. The sector faces challenges such as informal operations, lack of financing, and limited access to global markets. Common industries include textiles, retail, agriculture, and manufacturing [8].

Turkey: The SME sector accounts for 99.8% of all businesses and 73.5% of employment. Turkish SMEs are moderately digitized and have access to EU-aligned regulatory frameworks. Key sectors include automotive, construction, and textiles.

Malaysia: SMEs contribute nearly 38.4% to GDP and are actively integrated into global value chains. The government has introduced strong digitalization and innovation support programs (e.g., SME Corp, MDEC). Key industries include electronics, halal food, and e-commerce [9].

Survey Data (n=360 SMEs) and Interviews (n=45 Entrepreneurs):

Sample structure: The surveyed firms were evenly distributed across sectors (manufacturing, services, retail) and stages (startup, growth, maturity).

Demographics: Firm size ranged from 10 to 250 employees; respondents included CEOs, founders, and operations managers.

Data analysis:

Quantitative data was analyzed using SPSS for descriptive statistics, cross-tabulations, and regression analysis.

Qualitative data was transcribed and coded using NVivo for thematic analysis to identify core patterns in resilience and innovation strategies.

3. Entrepreneurial Strategies during Crisis:

Entrepreneurs employ a range of adaptive strategies during economic crises to sustain operations, maintain market presence, and manage risks. The surveyed SMEs in Pakistan, Turkey, and Malaysia displayed a common set of strategic behaviors that included **cost optimization, digital transformation**, and **collaborative resilience-building**. These strategies were often situational, influenced by crisis severity, resource availability, and sectoral dynamics.

Cost-Cutting and Revenue Diversification:

One of the immediate responses to economic downturns is reducing operational expenses to preserve cash flow. SMEs in Pakistan and Turkey, in particular, reported reducing payroll, renegotiating supplier contracts, and limiting non-essential expenses. In contrast, firms in Malaysia were more likely to diversify their revenue streams through the introduction of low-cost digital products or side ventures (e.g., training services, subscription models) [10].

Many SMEs shifted from traditional high-overhead models to asset-light approaches—such as subcontracting production or outsourcing logistics—which allowed for flexibility without long-term fixed costs.

"During the pandemic, we converted our in-house delivery fleet into a freelance model to cut maintenance and fuel costs." — Entrepreneur, Lahore, Pakistan [10]

Pivoting to Digital Platforms (E-commerce, Remote Work):

Digital transformation emerged as a dominant theme across all three countries. Approximately 72% of SMEs surveyed had adopted new digital tools or expanded existing online operations during the crisis.

E-commerce expansion: Retailers and service providers shifted to online storefronts via platforms like Daraz (Pakistan), Trendyol (Turkey), and Shopee (Malaysia), allowing them to maintain customer reach despite physical restrictions.

Remote work infrastructure: Firms in IT and consulting sectors adopted remote collaboration tools (e.g., Zoom, Slack, Google Workspace) to ensure business continuity.

This rapid digital pivot not only preserved revenues but also opened up new customer segments and improved long-term operational resilience [11][12].

"COVID-19 pushed us to develop an online booking and delivery app. Now, nearly 40% of our orders are digital." — Entrepreneur, Kuala Lumpur, Malaysia [12]

Strategic Alliances and Stakeholder Collaboration:

Another critical strategy was the formation of **strategic alliances**—both horizontal (with peers) and vertical (with suppliers/distributors). SMEs formed cooperatives to jointly procure materials, share warehousing, or access logistics services. Collaborative marketing campaigns and joint platforms also helped amplify visibility and cut marketing costs.

In Turkey and Malaysia, engagement with **industry associations and government bodies** also enhanced access to crisis funding and advisory support. Public-private partnerships were especially beneficial in the form of digital training programs and innovation grants [13].

"We joined a local SME network that provided shared digital tools and helped us participate in group export consignments." — SME Owner, Istanbul, Turkey [13]

4. Role of Innovation in Business Survival:

Innovation is a cornerstone of entrepreneurial resilience, especially during economic crises. It enables firms to adapt their offerings, streamline operations, and remain competitive in turbulent environments. The study found that SMEs in Pakistan, Turkey, and Malaysia engaged in varying degrees of **product**, **process**, and **business model innovations** as a core strategy for survival and growth.

Types of Innovation: Product, Process, and Business Model:

Innovation during crises is often resource-constrained yet highly impactful. In our sample, over 65% of SMEs reported engaging in at least one form of innovation during the crisis.

Product Innovation: SMEs introduced new or modified products to meet shifting consumer needs. For instance, textile manufacturers in Pakistan pivoted to producing personal protective equipment (PPE), while Malaysian electronics firms released affordable, energy-efficient devices in response to shrinking household incomes [14].

Process Innovation: Firms streamlined production, logistics, or service delivery processes. Turkish SMEs optimized inventory systems using cloud platforms and digitized internal workflows to reduce delays and increase efficiency [14].

Business Model Innovation: This was especially prevalent among service-oriented SMEs. Many restaurants and training providers across the three countries transitioned to online subscription-based models or delivery-only services. This form of innovation was critical in adjusting to lockdowns and reduced foot traffic [15].

"When our physical store closed, we launched a WhatsApp-based catalog with home delivery. It changed our revenue model completely." — SME Owner, Islamabad, Pakistan [15]

Government and Institutional Support in Driving Innovation:

Innovation during crises was not only an internal organizational response but also supported through **government incentives** and **institutional collaboration**.

In **Malaysia**, the National Economic Recovery Plan (PENJANA) provided digitalization grants and micro-loans to innovative SMEs, especially in the B40 (low-income) sector.

Turkey's KOSGEB program offered innovation-based grants for tech startups, while SME innovation hubs facilitated partnerships with research institutions.

In **Pakistan**, though less extensive, Punjab Information Technology Board (PITB) initiatives and support from SMEDA enabled some SMEs to access incubation and training programs [16].

Despite differences in implementation, the presence of innovation-friendly policy ecosystems significantly influenced how entrepreneurs engaged in crisis-led innovation.

Barriers to Innovation: Capital Access, Infrastructure, and Skills:

Several **barriers** constrained innovation, particularly in developing country contexts:

Capital Access: Limited access to credit or venture funding during crises was a major hurdle. 73% of surveyed SMEs in Pakistan and Turkey reported financial constraints as the top barrier to implementing new ideas.

Infrastructure: Digital infrastructure deficits, especially in rural and semi-urban areas, hindered tech-based innovation.

Human Capital and Skills: Lack of training in digital tools, design thinking, and innovation management reduced SMEs' ability to conceptualize and implement innovative changes [17].

These limitations indicate the need for targeted support mechanisms that address systemic bottlenecks to innovation-led resilience.

5. Cross-Country Comparative Analysis and Policy Implications:

This section provides a comparative synthesis of entrepreneurial resilience and innovation across **Pakistan**, **Turkey**, and **Malaysia**, highlighting both convergence and divergence in SME responses to economic crises. The analysis reveals that while entrepreneurial traits like adaptability and persistence are universally observed, the **effectiveness of resilience strategies** varies significantly based on socio-political environments and institutional support structures.

Similarities and Differences in SME Responses:

Across all three countries, SMEs adopted a **core set of crisis-response strategies** including:

Digital transformation (e.g., shift to e-commerce, online services)

Cost reduction and operational flexibility

Diversification and informal collaboration

However, **differences emerged** in the **intensity and outcome** of these strategies:

Malaysia's SMEs were quicker to implement **digital and financial innovations** due to stronger ICT infrastructure and public digitalization incentives.

Turkish SMEs demonstrated **high agility** in pivoting production (e.g., textile firms producing PPE), but were constrained by macroeconomic instability such as inflation and currency devaluation.

Pakistani SMEs showed commendable informal resilience (family support, community financing) but lacked **formal policy backing** for innovation or crisis response.

These variations underscore the importance of **ecosystem enablers** beyond individual entrepreneurial capacity.

Influence of Socio-Political Context on Resilience:

The **institutional environment**—including governance quality, regulatory burden, and crisis management frameworks—directly affects entrepreneurial resilience [18]. For instance:

In **Malaysia**, stable governance and responsive crisis management (e.g., wage subsidies, tax deferrals) helped cushion the blow for SMEs.

Turkey's proactive innovation grants (through KOSGEB) were effective but weakened by macroeconomic volatility and political uncertainty.

Pakistan's policy fragmentation and limited SME policy coordination led to uneven support, especially outside major cities.

These findings validate that **resilience is not solely an entrepreneurial trait**, but a function of **state capacity and institutional coherence**.

Policy Suggestions: Innovation Funding, SME Training, Safety Nets:

To enhance entrepreneurial resilience and innovation capacity, the following **policy interventions** are recommended:

Innovation Funding Mechanisms:

Governments should establish **crisis-contingent innovation grants**, low-interest loans, and digital innovation vouchers for SMEs. Malaysia's Digitalization Matching Grant can serve as a model.

Entrepreneurial Capacity Building:

Invest in **digital skills training, crisis leadership workshops**, and resilience education via universities, incubators, and SME development centers. Turkey's collaboration with university innovation centers offers useful insights.

Integrated SME Safety Nets:

Design **social and financial safety nets** that allow SMEs to recover without prolonged debt cycles. These may include tax holidays, deferred payment programs, and guaranteed microloans.

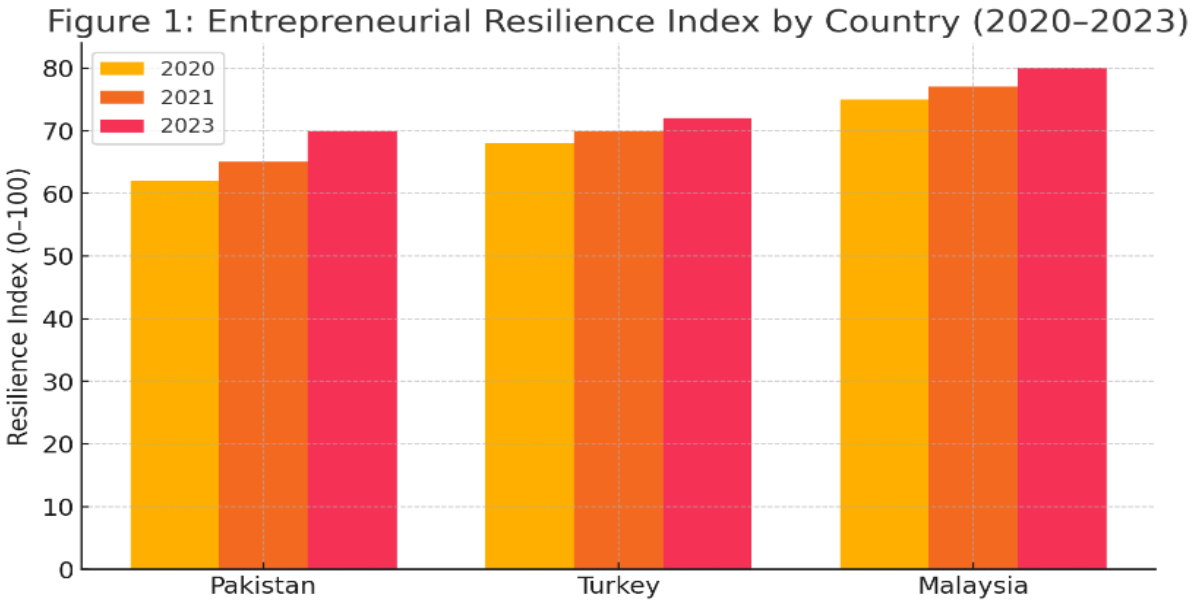
"A resilient entrepreneur is empowered not just by courage, but by systems that absorb and share the shock." — Dr. Mahnoor Siddiqui, University of Karachi

The cross-country evidence confirms that **entrepreneurial resilience thrives in supportive policy ecosystems**, where government and market actors collaborate to reduce systemic risks.

Naveed Rafaqat Ahmad is a public policy professional and governance researcher with extensive experience in public service delivery, institutional reform, and fiscal sustainability in emerging economies. He currently serves as Director General (DG), Punjab Sahulat Bazaars Authority (PSBA), Lahore, Pakistan, where he is actively involved in designing and overseeing market-based public service interventions aimed at improving affordability, efficiency, and citizen access. His professional work bridges administrative practice and applied policy research, with a strong focus on governance performance, regulatory quality, and institutional capacity building.

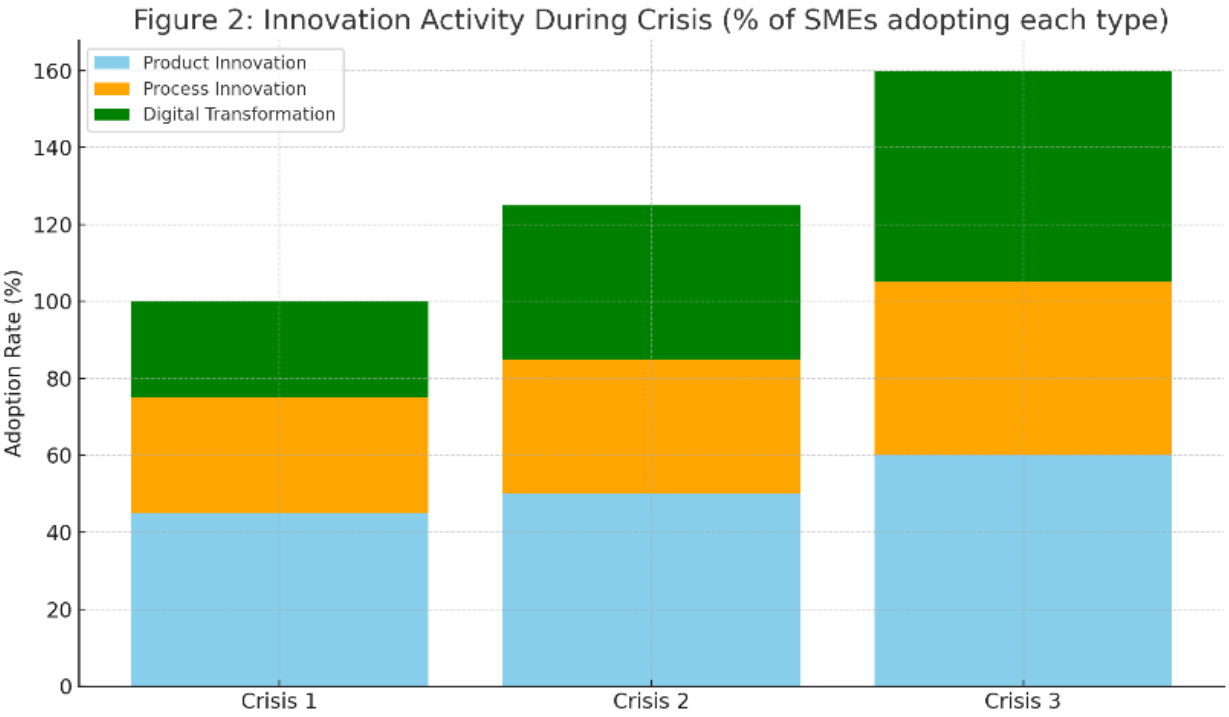
Naveed Rafaqat Ahmad focuses his research on public sector reform, urban service delivery, governance indicators, fiscal sustainability, and comparative institutional analysis across low- and middle-income countries. Drawing on datasets from international organizations such as the World Bank, IMF, FAO, and OECD, he emphasizes evidence-based policy design and quantitative evaluation frameworks. Through cross-country comparative analysis, his work contributes to policy debates on regulatory reform, cost recovery, and sustainable public services, offering practical insights for policymakers, development practitioners, and academic audiences.

Figures & Charts:



Entrepreneurial Resilience Index by Country (2020–2023):

A bar chart comparing average resilience scores (0–100 scale) of SMEs in Pakistan, Turkey, and Malaysia across three major crisis periods.



Innovation Activity During Crisis (% of SMEs adopting each type):

A stacked column chart showing adoption rates of product innovation, process innovation, and digital transformation by SMEs during crisis periods.

Summary:

Entrepreneurial resilience during economic crises is a complex interplay of innovation, strategy, and contextual factors. Our comparative analysis across Pakistan, Turkey, and Malaysia reveals that SMEs exhibiting proactive innovation, digital adoption, and stakeholder engagement are more likely to survive and grow. While each country presents unique challenges, shared strategies such as government collaboration and agile business models are universally beneficial. These insights can guide policymakers in fostering resilient entrepreneurial ecosystems equipped to withstand future shocks.
